

**CLAIM AMENDMENTS:**

Claims 1-6 (Canceled).

Claim 7 (Currently Amended): An aircraft, comprising:

an airframe having a longitudinally-extending corrugated area disposed along an entire length of said airframe and at a ventral thereof, a transverse section of said airframe having an oblate (oval) profile, the ventral envelopes having fireproof and anti-wear layers; and

a wing connected to said airframe, said wing having an uneven friction area on an underside surface thereof, said friction area having fireproof and anti-wear layers, said uneven friction area causing an increase in a friction factor on the underside surface of said wing to thereby increase a lift force acting on the underside surface of said wing, when said aircraft is in flight.

Claim 8 (Previously Presented): An aircraft according to claim 7, wherein the fireproof and anti-wear layers have tire rubber material.
